

The 6600 is a bladed unit that fits some electric trimmers. It snaps in place replacing the original bottom spool housing cover thus the electric trimmer must have tabs holding the bottom housing in place.

If you would like to know if the 6600 fits your trimmer then please remove the bottom of the spool housing and measure the length and diameter of the tabs. The tabs on the 6600 are 3 ¼" apart (#4).

The body of the tabs is 11/16" from the top to the edge of the head to the top of the tab(#1), the part that snaps into the holes on your spool housing is 7/16" tall (#2) and 5/8" at its widest (#3).
